

HRP 标记的兔抗水貂 IgG

中文名称: HRP 标记的兔抗水貂 IgG

英文名称: HRP-conjugated Rabbit anti-Mink IgG

相关类别: HRP 标记二抗

储 存: 冷冻(-20℃)

标记物: HRP

技术规格

Background	Immunoglobulin G (IgG), is one of the most abundant proteins in s erum with normal levels between 9.5-12.5 mg/ml in adult blood. Ig G is important for our defence against microorganisms and the mol ecules are produced by B lymphocytes as a part of our adaptive im mune response. The IgG molecule has two separate functions; to bi nd to the pathogen that elicited the response and to recruit other c ells and molecules to destroy the antigen. The variability of the IgG pool is generated by Somatic recombination and the number of spe cificities in an individual at a given time point is estimated to be 10 11 variants.
Applications	1/1000-5000 for ELISA 1/1000-5000 for Western blotting 1/200-500 f or Immunohistochemistry 1/200-500 for Immunocytocehmistry
