

兔抗狗 IgG

中文名称: 兔抗狗 lgG

英文名称: Rabbit Anti-Dog IgG

相关类别: 其他二抗

储 存: 冷冻(-20℃)

标 记 物: Unconjugate

技术规格

Background:	Immunoglobulin G (IgG) is one of the most abundant proteins in serum with normal levels between 8-17 mg/mL in adult bloo d. IgG is important for our defense against microorganisms and the molecules are produced by B lymphocytes as a part of our adaptive immune response. The IgG molecule has two separate functions, to bind to the pathogen that elicited the response a nd to recruit other cells and molecules to destroy the antigen. The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 1011 variants.
Applications:	Optimal tested applications and working dilutions must be dete rmined by the end user.
