

兔抗大鼠 IgG

中文名称: 兔抗大鼠 IgG

英文名称: Rabbit anti-Rat IgG

相关类别: 其他二抗

储 存: 冷冻(-20℃)

技术规格

Background	Immunoglobulin G (IgG) is one of the most abundant proteins in ser um with normal levels between 9.5-12.5 mg/ml in adult blood. IgG i s important for our defense against microorganisms and the molecul es are produced by B lymphocytes as a part of our adaptive immun e response. The IgG molecule has two separate functions; to bind to the pathogen that elicited the response and to recruit other cells an d molecules to destroy the antigen. The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 1011 varian ts.
Applications	1/500-2000 for ELISA 1/100-500 for Western blotting 1/100-200 for I mmunohistochemistry
