

FITC 标记山羊抗小鼠 IgG

- 中文名称: FITC标记山羊抗小鼠 IgG
- 英文名称: FITC-conjugated Goat anti-mouse IgG
- 相关类别: 荧光标记二抗
- 储 存: 冷冻 (-20℃)
- 标记物: FITC

技术规格

| Background: | Immunoglobulin G (IgG) is one of the most abundant prote ins in serum with normal levels between 8-17 mg/mL in ad ult blood. IgG is important for our defense against microor ganisms and the molecules are produced by B lymphocytes as a part of our adaptive immune response. The IgG molec ule has two separate functions, to bind to the pathogen th at elicited the response and to recruit other cells and mole cules to destroy the antigen. The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimat ed to be 1011 variants. |
