技术规格

Background:	The protein encoded by this gene phosphorylates the inhibitor in the inhibitor/NF-kappa-B complex, causing dissociation of the inhibitor and activation of NF-kappa-B. The encoded protein itself is found in a complex of proteins. Several transcript variants, some protein-coding and some not, have been found for this gene.
Applications:	IF
Name of antibody:	IKKB(Phospho-Tyr199)
Immunogen:	Peptide sequence around phosphorylation site of tyrosine 199(Q-K-Y(p)-T-V) derived from Human IKK-β.
Full name:	inhibitor of kappa light polypeptide gene enhancer in B-cells, kinase beta
Synonyms :	IKK2; IKKB; IMD15; NFKB1KB; IKK-beta
